

Enterprise-Wide Kubernetes

Efficiently operate Kubernetes across all your teams!

Kubernetes promises to be your innovation engine, provided you can manage its complexity, and efficiently increase adoption of cloud-native technologies within your enterprise. Managing multiple Kubernetes clusters and running several business-critical applications at scale across clouds is complex, cumbersome, and costly.

Nirmata provides an open and easy-to-adopt platform to deploy, operate, and optimize Kubernetes workloads on any infrastructure. With Nirmata, you can standardize on Kubernetes as your multi-cloud operating system, cleanly decouple applications from infrastructure, and accelerate innovation.

What Nirmata can do for you?

Accelerate time-to-value

Instantly deploy Kubernetes clusters or on-board your teams to existing Kubernetes clusters. Empower your developers to rapidly innovate by deploying applications on-demand and quickly identifying any fixing issues. Nirmata customers have seen 10x improvement in their product release cycles and 5X faster recovery from failures.

Increase Efficiency

Adopting Kubernetes and containers can significantly improve the utilization of your infrastructure but ensuring efficient utilization of cluster resources continues to be challenging. Nirmata enables you to efficiently manage resource utilization across multiple clusters independent of how and where they are deployed.

Improve Customer Experiences

A direct benefit of removing friction for developers, is improved quality and user experiences. By leveraging Nirmata, and cloud-native technologies, product teams can shorten development cycles, collect more data and feedback from users. Nirmata allows your team to focus on providing business value and leave the undifferentiated heavy lifting to the platform.

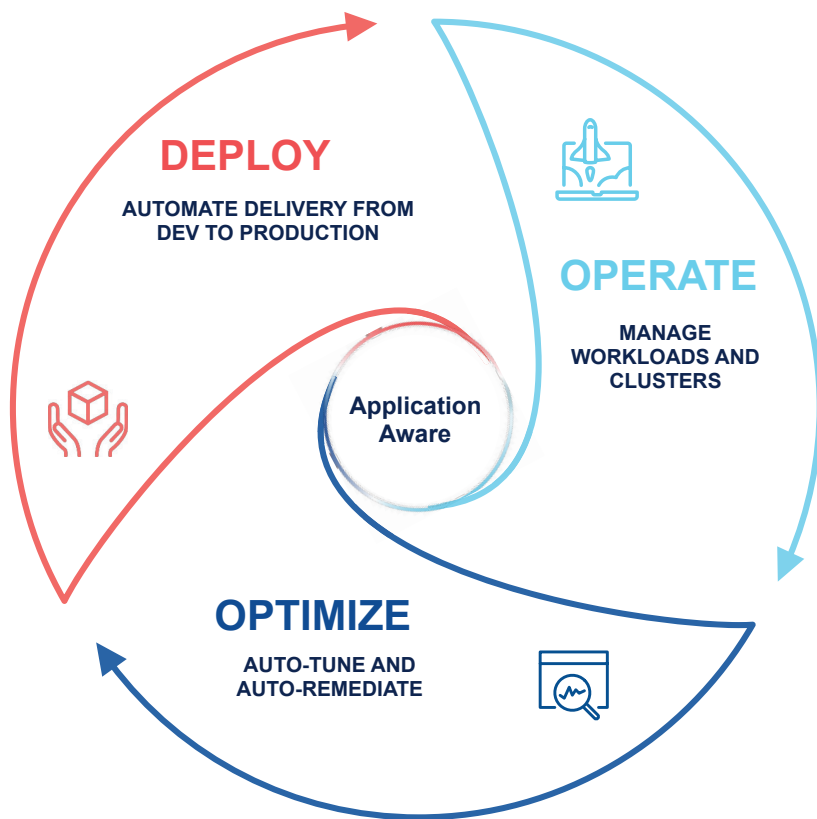

Top Use Cases for Nirmata Customers

Kubernetes-as-a-Service

Application
Consolidation

Application
Modernization

Deploy, Operate and Optimize the lifecycle of all your containerized applications. Use 100% upstream Kubernetes managed by a solution designed for the enterprise.

Features and Benefits

Composable

Design your own Kubernetes stack. Nirmata ensures consistency.

Any Kubernetes

Any Kubernetes distribution, release. Eliminate curation and lock-in.

Infrastructure Agnostic

Public, private, hybrid, or bare-metal. Install new, or manage existing, clusters.

Application Aware

You choose. Based on your company privacy and compliance regulations.

Web Scale

Single pane of glass management across clusters. Metrics, alarms, remediation.

White Glove Service

Experienced enablement team supports you at every step of your journey.
